## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, 18-22 and 25-27, drawn to a machine for spinning granular sugar into filaments, classified in class 425, subclass 9.
- II. Claims 11-17 and 23-24, drawn to a method for preparing cotton candy, classified in class 426, subclass 417.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process/method and apparatus for its practice.

The inventions are distinct if it can be shown that either: (1) the process/method as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process/method. (MPEP § 806.05(e)). In this case the method as claimed can be practiced by another and materially different apparatus without the specifics of the Group I apparatus, i.e. first switch, delay circuit, etc.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the search required for Group I is not required for Group II, and because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
